# Financial Models Using Simulation and Optimization II

## Table of Contents

**Chapter 1: The Discrete Random Variable**

**Chapter 2: The Triangular Random Variable**

**Chapter 3: The Normal Random Variable**

**Chapter 4: The Lognormal Random Variable and VAR**

Estimation of  $\mu$  and  $\sigma$

Value At Risk (VAR)

Modeling Stock Prices

Computing Percentage Return

Running and Interpreting the Simulation Output

**Chapter 5: The RiskGeneral Random Variable**

**Chapter 6: The RiskCumulative Random Variable**

**Chapter 7: Incorporating Analyst Forecasts**

Incorporating Analysts' Biases

Incorporating the Strong Buy/Strong Sell Consensus

**Chapter 8: Generating Correlated Stock Forecasts**

**Chapter 9: Generating Stock Returns by Bootstrapping**

Combining Bootstrapping With Analyst Forecasts

**Chapter 10: Portfolio Optimization**

Bootstrapping to Future Annual Returns

Minimize Risk of Portfolio (Standard Deviation)

Finding the Efficient Frontier

Minimizing the Probability of a Loss

An Introduction to Genetic Algorithms

Maximizing the Sharpe Ratio

Minimizing Downside Risk

**Chapter 11: Long a Stock; Short Some Puts?: The Nortel Trade**

Stress Testing

**Chapter 12: Evaluating Trading Rules: The Moving Average**

**Chapter 13: Evaluating Stop Loss Trades**

**Chapter 14: Modeling a Risk Arbitrage Trade**

Alternative Methods for Evaluating Trades

**Chapter 15: Modeling Stock Prices as Mean Reverting**

**Chapter 16: Optimal FX Hedging**

**Chapter 17: How Long a Time Horizon for Beta?**

**Chapter 18: Matching a Given Market Index**

**Chapter 19: The Three Stage Valuation Model**

**Chapter 20: Modeling Key Drivers of Firm Value**

Modeling Nike Revenue Growth

Modeling COGS/Revenue

SGA/Revenue

NPPE/Revenue

Forecasting Growth of Grocery Market

**Chapter 21: An Eyeball Model of an Internet Company**

Tornado Graphs

**Chapter 22: Determining Effective Marginal Tax Rates**

**Chapter 23: Incorporating Simulation into Proforma Models**

A Deterministic Proforma

Computing Free Cash Flow

Incorporating a Variable Interest Rate

Incorporating a Target Debt/Equity Ratio

Using Monte Carlo Simulation with Proformas

Monte Carlo Simulation with Scenarios

Simulating an Unfavorable Future

**Chapter 24: Forecasting Income of a Major Corporation**

What If Net Incomes Are Not Correlated?

Checking the Correlations

**Chapter 25: Forecasting Structural Costs**

Structural Costs Problem

Modeling the Uncertainty

Timing of Costs

Bookkeeping Each Quarter's Costs

Running and Interpreting the Simulation

**Chapter 26: Modeling the Profitability of a New Product: Batmobile Sales**

Scenarios

**Chapter 27: The XNPV and XIRR Functions**

**Chapter 28: Option Definitions**

**Chapter 29: Types of Real Options**

- Option to Purchase an Airplane
- Abandonment Option
- Other Real Option Opportunities

**Chapter 30: Valuing Options by Arbitrage Methods**

**Chapter 31: Modeling Stock Price or Project Value with Lognormal**

- Simulating the Lognormal Random Variable

**Chapter 32: The Black-Scholes Option Pricing Model**

- Comparative Statics Results
- Valuing Warrants

**Chapter 33: Estimating Volatility**

- Historical Approach to Volatility Estimation
- The Implied Volatility Approach

**Chapter 34: The Risk Neutral Approach to Option Pricing**

- Logic Behind the Risk Neutral Approach
- Example of Risk Neutral Pricing
- Proof that American Call is Never Exercised Early

**Chapter 35: The State Price Approach to Asset Valuation**

**Chapter 36: Valuing an Internet Start-up with Black-Scholes Formula**

- Valuing an Internet Start-up
- Valuing a "Pioneer Option": Web TV

**Chapter 37: Valuing an R and D Project**

**Chapter 38: Relationship Between Binomial and Lognormal Models**

- Using Simulation to Show the Binomial Approximation Works
- An Approximation to the Approximation!

**Chapter 39: Pricing an American Option with Binomial Trees**

- The Stock Price Tree
- The Optimal Decision Strategy
- Using Conditional Formatting to Describe the Optimal Exercise Policy
- Relationship to an Abandonment Option
- Computing the Early Exercise Boundary

**Chapter 40: Using Real Options to Value a Lease on a Gold Mine**

- Generating Gold Prices
- Finding Value of Lease

- Chapter 41: Valuing an Option to Purchase a Company**
- Chapter 42: Valuing an Option to Abandon the Internet Startup**
  - When Should We Abandon?
- Chapter 43: Valuing an Option to Purchase with an Abandonment Option**
- Chapter 44: Using Simulation to Value European Real Options**
  - Valuing the Option to Expand
  - Valuing the Option to Contract
  - A "Pioneer" Option
- Chapter 45: Using Simulation to Value an Option to Develop Vacant Land**
- Chapter 46: Using Simulation to Value a Compound Option**
- Chapter 47: Using Simulation to Value a Licensing Agreement**
- Chapter 48: Using the Jump Diffusion Model to Value Real Options**
  - Applying the Jump Diffusion Model to our Web TV Example
- Chapter 49: Pricing Options with Non Lognormal Stock Prices**
  - Calibrating Risk Neutralization to Market Prices
- Chapter 50: An Option to Start Up and Shut Down a Gold Mine**
- Chapter 51: Using Trend Curve to Estimate Product Demand**
- Chapter 52: Pricing for a Subscription-Based Service**
- Chapter 53: Optimal Product Bundling**
  - How to Find Revenue Maximizing Prices?
  - Using Evolver to Find Optimal Bundle Prices
- Chapter 54: Optimal Quantity Discounts with Evolver**
- Chapter 55: Price Response to Currency Fluctuation**
  - Constant Elasticity Case
- Chapter 56: Pricing in the Presence of Gray Imports and Piracy**
- Chapter 57: Conjoint Analysis**
  - Determination of Product Market Share
- Chapter 58: Discrete Choice Analysis**
- Chapter 59: Discrete Choice II**
  - Optimizing Profitability
- Chapter 60: Estimating Customer Preferences by Pair wise Comparisons**
- Chapter 61: Optimizing Channel Conflicts**
- Chapter 62: To Free PC or Not to Free PC?**
  - Per Customer NPV with No Free PC

**Chapter 63: Working With Text Functions**

Concatenation

**Chapter 64: More on Text Functions**

**Chapter 65: Playing Craps with @RISK**

**Chapter 66: Simulating the NBA Finals**

**Chapter 67: Database Statistical Functions**

**Chapter 68: Analyzing Data by Resampling**
